

My name is Hélène and I present you

# Good Leaf

Discover edible plants!

## Good Leaf is about...

- discovering edible plants from everywhere!
- learning that plants around you have edible parts you never thought of!
- trying and eating new plants while taking a walk!

The challenges I encountered while coding Good Leaf were...

- mainly a lack of sleep and time
- the limitations of our actual knowledge (fetch / post)

# The process of coding Good Leaf has been to...

- find a useful goal and a great API responding to this one
- think about what to display
- learn how to navigate in the Trefle API database

# The learning made while coding Good Leaf is...

- to get and use data from elsewhere
- to have a deployment and a development branches on Github

Demo time!

# Good Leaf deployment
